Duplicate this document for each Mini SEO Audit.

Replace every bracketed placeholder before delivery and remove these setup notes from the client-facing copy.

Commercial scope:

The standard Mini SEO Audit is planned as an 8-hour audit at R1,150/hour, for a project value of R9,200 excluding VAT unless otherwise agreed.

Cost to client: R11k or R12k

Required source pack before writing:

- - Crawl and URL data: URLs, Trailing slashes, Content words and ORPHAN PAGES tabs.
- - Metadata and headings: page titles, meta descriptions, H1 tabs, duplicate/missing/long/short tabs and social sharing tabs.
- - Link data: internal links, external links, anchor text, referring domains, backlinks, anchors and link intersect tabs.
- - Performance and indexing evidence: PageSpeed, Core Web Vitals where available, Google Analytics and Google Search Console screenshots/exports.
- - Keyword research: seed brainstorming, existing keywords, keyword intersect, location/core service/emergency/problem/property/trust/question brackets.
- - Competitor research: chosen competitor sheet, competitor analysis workbook and SERP/keyword gap exports.
- - Strategy outputs: proposed sitemap, content strategy recommendations and worklog/action list.

Writing order:

1. Complete the data collection sheets first. Do not write findings from memory.
2. Summarise technical findings from the crawl, URL, redirect, indexation, speed, security and analytics/GSC evidence.
3. Summarise keyword and competitor gaps from the keyword research, keyword intersect and competitor analysis sheets.
4. Create the content strategy and proposed sitemap before finalising the content audit section.
5. Populate the report section by section, keeping findings evidence-led and recommendations action-led.
6. QA the final document for unresolved placeholders, stale client names, unsupported claims and duplicated recommendations.

Reusable placeholders:

{ClientName}, {ClientShortName}, {ClientDomain}, {ClientWebsiteURL},
{PrimaryLocation}, {PrimaryService}, {AuditDate}, {AgencyName}, {Competitor1},
{Competitor2}, {Competitor3}, {Competitor4}, {Finding}, {Evidence},
{Recommendation}, {Priority}, {Owner}, {SourceSheetTab}.

Key

	Green - Done well / trivial room for improvement
	Orange - Done poorly / room for improvements
	Red - Current state is detrimental to overall SEO / completely unimplemented
	Blue - Our recommendation

TECHNICAL AUDIT

{client}

Introduction

SEO services can play a crucial role in building visibility, brand awareness, traffic, and sales from organic search. We take an active step in understanding your business, its branding and positioning. There are over [200 ranking factors](#) to Google's algorithm.

Our approach focuses on targeting those factors that have the most influence, and those that will have the biggest return on investment.

A complete SEO Audit consists of three components:

- 1. Technical / sitewide problems**

2. Content / on-page / page-specific problems
3. Off-page / competitor problems.

Template Quality Rules

Use the older Technical, Content and Competitor master templates as the model: keep reusable education text and audit section order, but keep findings and recommendations deliberately fillable. Do not leave completed-client conclusions in place with only names swapped out.

Conditional writing rules:

- Historical performance: write a trend only if the source has a valid comparison period. If not, write “No reliable historical comparison is available from the supplied data.”
- Existing keywords: separate current rankings from gained/lost keywords. Do not say visibility was lost unless the comparison tab proves it.
- Google Analytics/GSC: state whether data exists, the date range, and whether setup happened before or during the audit.
- Competitors: distinguish search competitors from real-world competitors, and cite the competitor-selection sheet.
- Counts and metrics: every number must come from a named source tab or current tool export.
- Service recommendations: recommend only confirmed services, or mark “confirm before publishing.”
- Content strategy: separate new landing pages, existing-page optimisations, blog/supporting content, sitemap changes and worklog actions.
- Summary and Areas for Improvement: write these last from completed findings; never use them to introduce unsupported claims.

This Technical Audit will deal with aspects relating to:

- The **Domain** (such as domain resolve problems or a lack of SSL),
- Your relationship with **Google** (ie. Google Analytics being set up poorly or Google My Business lacking details),
- Various **Technical SEO** properties (ie. slow site speed or a broken XML sitemap), and
- **Wordpress** specific characteristics (such as missing or outdated plugins).

We use premium tools and a methodological approach to consider a broad spectrum of metrics. We will provide you with a snapshot of the health of your website, pinpoint any problems, and suggest remedies to these problems.

This report can be used as either a basis for a retainer, or as a blueprint for your internal development team to resolve any technical issues to grow your site's traffic.

This section reviews the domain signals that can affect trust, crawling, and duplicate-content control.

We assess the domain name, TLD, age, ownership signals, preferred version of the domain, HTTPS behaviour, and trailing slash consistency. The aim is to confirm that the site uses an appropriate domain setup, resolves cleanly to one preferred version, and does not create avoidable duplication or trust issues for search engines.

FINDINGS

- {ClientDomain} was registered on {DomainRegistrationDate}. Source: {WHOIS/RDAP source}. Add the registration age only if it materially supports the audit finding.
- N/A
- N/A

RECOMMENDATIONS

- None.

The next checks confirm whether Google and users are consistently sent to one canonical version of the site.

Preferred Domain & Trailing Slashes

Preferred domain refers to whether your domain has only 1 active variation. This means that you choose 1 variation of your domain and then redirect the other 3 variations to this preferred variation.

If you have multiple versions of your domain then you will not rank as well as you could (because Google will consider your content to be duplicate content, thus diluting your ability to rank).

Example:

The “root with SSL” domain was chosen to be the preferred domain for {AgencyName}, and thus all other domain variations are redirected to the preferred domain.

- “{PreferredDomainURL}/” (This is called the root domain)
- “http://www.{example-domain}/” (This is the www domain)
- “https://www.{example-domain}/” (This is the www with SSL)
- “https://{example-domain}/” (This is the root with SSL)

Trailing slashes refers to whether your URLs end with a “/” or not, and whether you are consistent in your approach regarding trailing slashes.

Poorly implemented trailing slashes can be extremely damaging because Google views (e.g.) <https://{example-domain}/about/> and <https://{example-domain}/about> as different pages, and so you can slip down the search results for duplicate content if you have both versions of a URL on your site.

For this mini audit, we only need to confirm whether the main domain variants and representative subpages resolve cleanly, and whether trailing slash handling could create duplicate URLs.

DATA COLLECTION

[Trailing slashes](#)

FINDINGS

- All 4 variations of your home URL were checked.
 - All variations redirect to your preferred URL: [{PreferredDomainURL}](#) {TBD}
 - Subpages also redirect properly.
- No trailing slash issues found

- N/A

- N/A

RECOMMENDATIONS

- None

301 Redirects & 404 Errors

This section reviews whether redirects and broken URLs are creating unnecessary friction for users or search engines. We focus on the issues most likely to affect crawl efficiency, user experience, and the flow of authority through the site.

- **301 Redirects:** We check whether redirected URLs are being used appropriately, and whether internal links point directly to the final destination page rather than passing users and crawlers through unnecessary redirects.
- **Redirect Chains:** We check whether any URLs redirect through multiple steps before reaching the final page. Long redirect chains can slow down crawling, dilute signals, and create avoidable technical complexity.
- **404 Errors:** We check whether important URLs return 404 errors, whether broken pages are linked internally, and whether any missing pages should be restored, redirected, or removed from internal links and sitemaps.
- **404 Page:** We check whether the site has a useful 404 page that returns the correct HTTP status, explains that the page cannot be found, and helps users continue their journey through clear navigation or links to key pages.

FINDINGS FOR [404 PAGE](#)

- 404 Page functions adequately
 - Users can navigate back to the homepage.

- N/A

- N/A

RECOMMENDATIONS

- Including a list of pages (services) relevant to your user is a good way to include internal links and direct users to your most valuable pages.

Google Analytics & Google Search Console

Google Analytics is a free web analytics tool offered by Google to help you analyze your website traffic.

Given that your website is the central hub of your digital presence, your website is the best way to give you a holistic view of the effectiveness of all the campaigns you are running to promote your product/services online.

Google Analytics is a way to measure the site's traffic and gain insight into how users perform, where they are coming from and how they're interacting with your site from both a holistic viewpoint all the way down to analysis of a single interaction.

Google Search Console tools and reports help you measure your site's Search traffic and performance, fix issues and make your site shine in Google Search results.

DATA COLLECTION

Manual tests

FINDINGS

- {GA/GSCDataAvailabilityFinding: State whether usable GA4 and GSC data is available, the date range reviewed, and any access/setup limitations.}
 - {AnalyticsSetupFinding: State whether GA4 was already installed, configured during the audit, unavailable, or needs implementation.}
- {SearchConsoleSetupFinding: State whether GSC is verified, pending, unavailable, or needs implementation.}
- Consider setting up a data studio report, {AgencyName} can do this for you.
- N/A

RECOMMENDATIONS

- We are happy to complete this aspect of the audit at a later date (weeks / months) to cover the data acquired.

Google Data Analysis

In this section we will analyse your Google Analytics data and your Google Search Console data.

The Google Analytics data goes back 2 years (24 months) and is monthly data, while the Google Search Console data goes back 16 months and is daily data (this is a limitation of Google Search Console).

DATA COLLECTION

FINDINGS

- {GA/GSCDataAvailabilityFinding: State whether usable GA4 and GSC data is available, the date range reviewed, and any access/setup limitations.}
 - {AnalyticsSetupFinding: State whether GA4 was already installed, configured during the audit, unavailable, or needs implementation.}
- N/A
- N/A

RECOMMENDATIONS

- We are happy to complete this aspect of the audit at a later date (weeks / months) to cover the data acquired.

Speed Test & Performance

Google has stated that [page loading speed](#) is an SEO ranking signal. Furthermore, it affects user experience - slow sites are horrible to use. You can boost your site speed by using a CDN, compressing images, and switching to faster hosting.

CDN

CDN is short for [content delivery network](#), which is a system of distributed servers (network) that deliver pages and other web content to a user, based on the geographic locations of the user, the origin of the webpage and the content delivery server. This service is effective in speeding the delivery of content of websites with high traffic and websites that have global reach.

Here's an image from [CloudFlare](#) which depicts this perfectly:

By using a CDN, like CloudFlare, when someone visits your website, the images will be loaded from the server closest to them.

We want to make sure your site doesn't take more than 4 seconds to load: [MunchWeb](#) found that 75% of users wouldn't re-visit a site that took longer than 4 seconds to load.

FINDINGS

Here are the current test results for the home page of the site:

Test Results	GTMetrix (SA)	Pingdom (UK)	PageSpeed Insights (mobile + desktop)
Page Size	2.28 MB	2.7 MB	n/a
Load Time	5.7s	987 ms	9.2s
Requests	81	82	n/a

Performance Rating	B - 73	C - 75	Mobile - 55 Desktop - 72
LCP	2.1s	n/a	2.7s
FCP	1.4s	n/a	Mobile: 9.2s Desktop: 0.6s
Speed index	2.0s	n/a	Mobile: 9.2s Desktop: 1.4s
CLS	0	n/a	Mobile: 0.021 Desktop: 0.001
TTFB	215ms	n/a	Mobile: 0ms Desktop: 10ms

***all tests were run in London servers (the closest available server option)**

- **Layout stability is strong.** CLS is excellent at **0.021** on mobile and **0.001** on desktop. GTmetrix also records LCP at **2.1s**, showing a solid foundation for performance improvements.
- **The homepage is moderately heavy.** It weighs **2.28–2.7MB** and generates **81–82** requests. Test results also vary significantly by location and tool, indicating that page assets and delivery efficiency should be reviewed.
- **Mobile performance is the priority.** PageSpeed Insights gives the site a mobile score of 55/100, with FCP and Speed Index both at 9.2s; LCP is 2.7s, slightly above Google's recommended 2.5s threshold. Mobile visitors may wait too long before useful page content appears.

RECOMMENDATIONS

- Optimise homepage imagery first: serve correctly sized responsive images in WebP or AVIF, compress source files, and lazy-load below-the-fold images. Preload the primary hero/LCP image rather than lazy-loading it.
- Reduce the number and impact of non-essential assets. Audit theme, plugin and third-party scripts; defer non-critical JavaScript, remove

unused CSS/JS, and limit unnecessary font files or font weights.

- Review caching and content delivery configuration. Enable full-page and browser caching where the hosting stack supports it, and confirm that static assets such as images, CSS and JavaScript are cached effectively through the existing CDN configuration.
- Retest following implementation from a test location that matches {PrimaryMarket}. Prioritise improving the relevant PageSpeed/Core Web Vitals metrics, and include target thresholds only where they match the performance source used.

Security Check & Malware Scan

Often a large drop in rankings occurs when a site is hacked with Malware. The hackers use your site to generate hundreds of spammy links and pages advertising unsavoury products such as payday loans or viagra pills.

FINDINGS

We ran your site through Google Security and Sucuri Scans. These are services which check for malware and hacks.

- No malware detected by scan (Low Risk)
- No injected spam detected (Low Risk)
- No defacements detected (Low Risk)
- No internal server errors detected (Low Risk)

- Site is up to date (Low Risk): using WordPress 6.9.5
- Site is not Blacklisted
 - 9 Blacklists checked

- N/A

- N/A

RECOMMENDATIONS

- Security hardening improvements
 - Add these Security Headers
 - Missing security header for ClickJacking Protection. Alternatively, you can use Content-Security-Policy: frame-ancestors 'none'.
 - Missing security header to prevent Content Type sniffing.
 - Missing Strict-Transport-Security security header.
 - Missing Content-Security-Policy directive. We recommend to add the following CSP directives (you can use default-src if all values are the same): script-src, object-src, base-uri, frame-src

Plugins

Over time most websites accumulate a number of plugins to enhance some aspect of the website or make some task easier. Some plugins will have security issues which crop up and are fixed by the plugin creator, and so it is important to monitor your plugins and keep them up-to-date.

FINDINGS

- N/A

- 1 out of 16 active plugins are not up-to-date.

- N/A

RECOMMENDATIONS

- Update Plugins to the most recent versions.
 - Please note when updating your site, it's critical to make backups as updating a plugin prematurely may result in unintended conflicts and having a backup will save a lot of time and money in case something goes wrong.
 - It is recommended to have a user or web developer who regularly checks up on these plugins and ensures that they are all up-to-date.
-

CONTENT AUDIT

Plum Plumbers

Introduction

A content audit is the process of evaluating existing content on your site to assess its quality and performance. It highlights what content should be deleted, redirected or improved.

We evaluate your on-page SEO to check that your pages are optimised for search engines in order to reach your target audience. While we do assess key metrics, a content audit is also more qualitative in nature. Understanding your target audience's intent is crucial for SEO and any successful content strategy. It's not just Google that looks at your content but your audience as well, and you have to cater to both.

We look at examples of your existing content and analyse them from an SEO perspective. We tell you what's being done right and what can be improved.

The content audit also identifies content gaps in terms of searched topics the site does not yet cover well. Depending on the available data, these may come from current rankings, historical comparison data, competitor keyword gaps, seed-term research or Google Search Console opportunities.

In these ways, the audit will help you and your team to better optimise or reuse existing content that may be performing poorly.

We also provide you with ideas and step by step guides for creating new content using frameworks that are working in SEO right now. And rather than taking a publish and pray approach, we suggest strategies for promotion and outreach to get your content seen and shared.

Existing & Competitor Gap

This section reviews whether the site is targeting the right search terms and whether those keywords match what potential customers are actually searching for.

- **Existing Keywords:** We assess the keywords the site already ranks for to understand what is working and where there may be quick-win opportunities.

- **Opportunity Keywords:** We identify relevant keywords the site could target but is not yet ranking for.
- **Keyword Difficulty:** We check whether target keywords are realistic, or whether the site should focus on medium-tail and long-tail terms that may be easier to rank for.
- **Search Intent:** We assess whether the chosen keywords match the intent of each page, so content attracts the right audience and supports the right action.

DATA COLLECTION

[Existing keywords](#)

[Top folders](#)

[Keyword intersect](#) [your competitors have these keywords but you don't]

FINDINGS

- {CurrentKeywordFinding: Summarise current rankings from the Existing Keywords sheet. If a comparison period exists, state whether visibility gained, declined or stayed broadly stable, citing the tab/date range. If no comparison period exists, state that no reliable historical trend can be concluded.}
- {HistoricalTrendFinding: Do not assume lost visibility. Choose one evidence-backed option only: current rankings present / no current ranking data / gained visibility / lost visibility / broadly stable / no reliable comparison period available.}
- {CompetitorKeywordGapFinding: Identify competitor keyword themes only from Keyword Intersect and Competitor Analysis. State whether gaps require new pages, existing-page optimisation, authority building, or operational confirmation before publishing.}

Service area	Keyword	Volume	KD	Competitor ranking
{PrimaryService}	{PrimaryServiceProvider}s near me	3,700	7	{Competitor4}: #10
Drainage	drain unblocker	3,100	0	{Competitor4}: #26
{ServiceTheme3/4}	{ServiceTheme3}	800	0	{Competitor4}: #1

{PrimaryService}	{PrimaryService} services	400	0	{Competitor3}: #1
{PrimaryService}	{PrimaryServiceProvider} {PrimaryLocation}	350	0	{Competitor2}: #5
Emergency {PrimaryService}	emergency {PrimaryServiceProvider}	350	0	{Competitor3}: #2
Drainage	{ServiceTheme1}	300	1	{Competitor3}: #1
{ServiceTheme2}	water {ServiceTheme2}	300	0	{Competitor4}: #10
{ServiceTheme3/4}	{ServiceTheme4} near me	250	0	{Competitor4}: #4
{AdjacentService3}	certificate of compliance	700	4	{Competitor2}: #28
{AdjacentService3}	{AdjacentService3} compliance certificate	250	0	{Competitor2}: #8
{AdjacentService3}	{AdjacentService3} certificate of compliance	200	0	{Competitor2}: #9
{AdjacentService3}	{AdjacentService3} and {PrimaryService}	40	4	{Competitor2}: #5

RECOMMENDATIONS

- Create or improve dedicated {PrimaryLocation} service pages for core {PrimaryService}, emergency {PrimaryService}, {ServiceTheme1}, drain unblocking, {ServiceTheme2}, {ServiceTheme3}, and {ServiceTheme4}. Use the identified keyword gaps naturally in the page title, heading structure, service copy, FAQs, and internal links.
- Prioritise low-KD, high-intent opportunities first, particularly {ServiceTheme3}, {ServiceTheme1}, water {ServiceTheme2}, emergency {PrimaryServiceProvider}, and {PrimaryServiceProvider} {PrimaryLocation}.

- Build a separate {AdjacentService3} service hub only for services {ClientName} is qualified and authorised to provide. Certificate-of-compliance keywords should only be targeted where the business can legally issue the relevant certification.
- Complete dedicated {PrimaryLocation} keyword research for air conditioning and {AdjacentService2} before creating those service pages. These new offerings are not represented in the current competitor Keyword Intersect, so the absence of rows should not be interpreted as a lack of demand.

Research

This section identifies the search terms worth targeting, including core keywords, related variations, and common questions.

- **Overview:** Broad seed keywords for the niche.
- **Matching Terms:** Keyword variations and long-tail opportunities.
- **Questions:** Search queries that can inform FAQs, guides, and blog content.

Cannibalisation

This section checks whether multiple pages are competing for the same keyword or intent.

- **Competing Pages:** URLs targeting the same search terms.
- **Search Intent Overlap:** Pages that may be too similar.
- **Recommended Fixes:** Consolidate, redirect, re-optimize, or clarify the primary ranking page.

DATA COLLECTION

[Keywords analysed](#)

[Keyword analysis: Locations](#)

[Keyword analysis: Core {PrimaryService}](#)

Keyword analysis: [Emergency {PrimaryService}](#)

 [Keyword analysis: Drain blocked/leak + Geyser leak](#)

 [Keyword analysis: HVAC {AdjacentService2}](#)

 [Keyword analysis: Trust & Comparisons](#)

 [Keyword analysis: {AdjacentService3}](#)

 [Keyword analysis: Property Types](#)

FINDINGS

- {PrimaryLocation} service keywords should lead the content plan.
 - {ClientName} operates only in {PrimaryLocation}, so the first priority is dedicated service pages targeting service-plus-Cape-Town searches.

Keyword	Monthly volume	KD	Suggested page
{PrimaryServiceProvider} {PrimaryLocation}	350	0	Core {PrimaryService}
electrician {PrimaryLocation}	300	28	{AdjacentService3}
{AdjacentService1} installation {PrimaryLocation}	200	1	{AdjacentService1} installation
emergency {PrimaryServiceProvider} {PrimaryLocation}	100	Not reported	Emergency {PrimaryService}
24 hour {PrimaryServiceProvider} {PrimaryLocation}	100	0	24-hour {PrimaryService}
geyser repair {PrimaryLocation}	90	Not reported	{ServiceTheme4}
fridge repair {PrimaryLocation}	80	13	{AdjacentService2} repairs

- Suburb pages should follow where {ClientName} operate:

- After the {PrimaryLocation} service pages are established, create selective suburb pages for verified coverage areas. Avoid mass-producing location pages with near-identical copy.

Keyword	Monthly volume	KD	Suggested page
{PrimaryServiceProvider} Durbanville	150	13	{PrimaryServiceProvider} in Durbanville
{PrimaryServiceProvider}s Table View	100	1	{PrimaryServiceProvider}s in Table View
{PrimaryServiceProvider} Sea Point	90	Not reported	{PrimaryServiceProvider} in Sea Point
{PrimaryServiceProvider} Bellville	80	0	{PrimaryServiceProvider} in Bellville
{PrimaryServiceProvider} Hout Bay	70	0	{PrimaryServiceProvider} in Hout Bay
{PrimaryServiceProvider} Fish Hoek	60	0	{PrimaryServiceProvider} in Fish Hoek
{PrimaryServiceProvider} Milnerton	50	0	{PrimaryServiceProvider} in Milnerton

- The questions tabs for certain keywords have popular questions for potential content creation

Search question	Monthly volume	Recommended content
When to call an emergency {PrimaryServiceProvider}	150	FAQ on the emergency {PrimaryService} page: warning signs that need an urgent call-out
How much does it cost to repair a burst pipe?	200	Burst-pipe cost guide, with variables that affect pricing and a CTA for {PrimaryLocation} assistance
How to repair a leaky pipe	2,400	Safety-first guide: immediate steps to limit damage, when to turn off water, and when to call a {PrimaryServiceProvider}
How much does emergency {PrimaryServiceProvider} cost?	100	Emergency {PrimaryService} pricing FAQ
How to find an emergency {PrimaryServiceProvider}	60	Guide to choosing a reliable emergency {PrimaryServiceProvider} in

		{PrimaryLocation}
When to call an emergency electrician	100	{AdjacentService3} emergency FAQ, only if {ClientShortName} provides this service and is appropriately qualified
What is an {AdjacentService3} installation certificate?	70	Certificate-of-compliance explainer, only if {ClientShortName} is authorised to issue it
How to service an {AdjacentService1}	60	{AdjacentService1} maintenance guide, with a service-booking CTA rather than unsafe DIY instructions
How much is {AdjacentService1} installation?	20	{AdjacentService1} installation cost guide for {PrimaryLocation}
How often should you service your {AdjacentService1}?	10	{AdjacentService1} servicing FAQ
Who to call for fridge repair	60	{AdjacentService2} repair page FAQ or short advice article
How to repair a fridge that is not cooling	10	Troubleshooting guide that explains when a technician is needed

- Commercial-intent service terms offer strong secondary targets.
 - These terms show people actively seeking a provider, rather than only researching a problem. They can be targeted on the relevant service pages alongside the {PrimaryLocation} modifiers.

Keyword	Monthly volume	KD	Recommended use
commercial {AdjacentService2}	80	12	Commercial {AdjacentService2} page
commercial {PrimaryServiceProvider} near me	60	Not reported	Commercial {PrimaryService} page
commercial {AdjacentService2} repair	10	Not reported	Supporting copy / FAQ on commercial {AdjacentService2} page
commercial {AdjacentService2} service	Not reported	Not reported	Supporting copy / service-page subheading
commercial electrician {PrimaryLocation}	Not reported	Not reported	{AdjacentService3} commercial-services page, only if offered

emergency {PrimaryService} commercial property	Not reported	Not reported	Emergency commercial {PrimaryService} page or section
{ServiceTheme2} commercial property	Not reported	Not reported	Commercial leak-detection page or section
cold room repair near me	150	Not reported	Restaurants, retailers, hospitality, food storage
{AdjacentService3} contractor	70	39	Business and facilities work; competitive term
HVAC services	60	0	Facilities and climate-control services
air conditioning contractor	30	0	Commercial installation and maintenance potential
{AdjacentService2} repair	20	0	Supports commercial {AdjacentService2} services
{AdjacentService3} installation service	20	Not reported	Commercial fit where {ClientShortName} provides installations

- Some broad variations are relatively difficult for their search volume.
 - These can be incorporated naturally in supporting copy, but should not be the primary focus of a new page while lower-difficulty {PrimaryLocation} and service terms are available.

Keyword	Monthly volume	KD	Why it is secondary
{PrimaryService} company	150	43	Broad and highly competitive
{PrimaryService} contractors	100	40	Broad and highly competitive
air conditioning near me	60	38	Competitive for limited volume
air conditioning company	40	35	Competitive for limited volume
electrician {PrimaryLocation}	300	28	Valuable, but needs a well-developed {AdjacentService3} page

- Be aware that there are adjacent unrelated keywords, e.g.

Adjacent keyword	Monthly volume	Why it is not a target
how to register a {PrimaryService} company in {Country}	10	Intended for someone starting a {PrimaryService} business
how to open a {PrimaryService} company	10	Business-owner rather than customer intent
how much do {PrimaryService} contractors make	20	Career and salary research
how to get {AdjacentService3} contractor licence	100	Trade qualification rather than {AdjacentService3}-service intent
how to register as an {AdjacentService3} contractor in {Country}	10	Business-registration intent
what is level 3 {AdjacentService3} installation	20	Training or education intent
how often to service car {AdjacentService1}	30	Refers to vehicle air conditioning, not building air conditioning
how to repair air conditioning in car	10	Refers to vehicle air conditioning
how to repair fridge door rubber at home	Not reported	DIY appliance-maintenance intent, unlikely to generate a qualified repair enquiry
how to repair scratch on fridge door	Not reported	Cosmetic appliance query, outside the core repair service

- N/A

RECOMMENDATIONS

- Build the site around separate **{PrimaryLocation} service pages** first: core {PrimaryService}, emergency {PrimaryService}, drain cleaning and blockages, {ServiceTheme2}, {ServiceTheme3} and repairs, {AdjacentService3}, {AdjacentService1}, and {AdjacentService2}. Each page should target one primary service-plus-Cape-Town keyword

theme.

- Add **suburb pages selectively** after the main {PrimaryLocation} pages are live. Only target suburbs that {ClientShortName} actively serves, and include service-specific, locally useful content such as availability, response times, local reviews, and relevant FAQs. Avoid duplicated location pages.
- Create a **Commercial Services {PrimaryLocation}** hub for business customers, then link to commercial {PrimaryService}, {AdjacentService3}, {AdjacentService1}, {AdjacentService2}, emergency response, {ServiceTheme2}, and maintenance sections or pages. Prioritise measured opportunities such as **commercial {AdjacentService2}** and **commercial {PrimaryServiceProvider} near me**; use unmeasured commercial-property modifiers naturally within the relevant service pages.
- Use lower-KD, service-led terms as the initial optimisation focus. Broader phrases such as **{PrimaryService} company**, **{PrimaryService} contractors**, and **air conditioning company** should be secondary targets, supported by strong service content, internal links, local proof, and reviews.
- Turn the relevant Questions-tab searches into FAQ content and advice articles, particularly around emergency-{PrimaryServiceProvider} costs, burst pipes, {AdjacentService1} servicing, {AdjacentService1} installation costs, {AdjacentService2} faults, and {AdjacentService3} emergencies. Link each article to the appropriate {PrimaryLocation} service page.
- Exclude career, training, business-registration, and vehicle-{AdjacentService1} keywords from the content plan. These searches are adjacent to {ClientShortName}'s services but do not represent the intended customer audience.
- Maintain a keyword-to-page map before publishing new pages. Assign one primary intent to each URL, for example emergency {PrimaryService}, commercial {AdjacentService2}, or {AdjacentService1} installation, to prevent future cannibalisation.

ON PAGE SEO

On-Page SEO

This section reviews the core page-level elements that help search engines understand each page and help users decide whether to click from search results. We focus on patterns that can be fixed across templates or priority pages.

- **Title Tags / Meta Titles:** We check whether page titles are present, unique, descriptive, the right length, and aligned with the page's main keyword or topic.
- **Meta Descriptions:** We check whether meta descriptions are present, unique, compelling, and written to improve click-through rate by clearly summarising the page and giving users a reason to visit.
- **Heading Structure:** We check whether pages use a clear H1 and logical H2/H3 structure so users, search engines, and assistive technologies can understand the hierarchy of the page.
- **Social Tags:** We check whether Open Graph and social sharing tags are present where relevant, so shared pages display with suitable titles, descriptions, and images.
- **Image Alt Text & Size:** We check whether important images have useful alt text and whether large images may be slowing down the page or creating unnecessary performance issues.

DATA COLLECTION

[Titles](#)

- [Short](#)
- [Long](#)
- [Duplicate](#)

- [Missing](#)

[Meta descriptions](#)

- [Short](#)
- [Long](#)
- [Duplicate](#)
- [Missing](#)

[Heading structure](#)

- [Short](#)
- [Long](#)
- [Duplicate](#)
- [Missing](#)

[OG Tags & Social Sharing](#)

- [OG Card Invalid](#)
- [Twitter Cards Invalid](#)

[Media Images & Alt Text](#)

- [Missing Alt Text](#)

GENERAL FINDINGS

- The crawl identified 13 indexable pages. Their title tags are present and unique, with no duplicate, missing, or overlong titles found. Twitter cards are also valid across the current indexable URLs.

- 0 pages have title tags that are too long,
- 0 pages have duplicate title tags, and
- 2 pages have short title tags: the homepage and About Us page.
- The crawl identified 144 links to 44 images missing alt text or containing generic alt text such as “client”.
 - Each image should be reviewed so informative images receive descriptive, service-relevant alt text containing a keyword.

- {MissingMetaDescriptionCount} indexable pages are missing meta descriptions
- {MissingH1Count} pages have no H1 heading.

GENERAL RECOMMENDATIONS

- Retain the existing unique-title approach, but rewrite short titles to describe the page clearly and include the most relevant {PrimaryLocation} service or brand context. Apply a consistent format to every future service, suburb, and commercial page.
- Write a unique meta description for every indexable page. Prioritise the homepage, Contact Us, About Us, the project hub, and all new {PrimaryLocation} service pages. Each description should summarise the service, location, and a clear reason to enquire.
- Add one descriptive H1 to every indexable page. The H1 should reflect that page's primary purpose and keyword theme, without duplicating the same generic wording across multiple URLs.
- Write alt text for images missing alt text, and alter alt text for images with generic alt text ("client").
 - Add concise, descriptive alt text to meaningful images, such as project photos and service imagery; and include relevant keywords.
- Configure complete Open Graph tags for all priority pages, including `og:title`, `og:description`, `og:url`, `og:type`, and a suitable `og:image`. Use page-specific share images for the homepage, key service pages, and major projects.
- Add these requirements to the publishing checklist for every new page, then recrawl the site after implementation to confirm all indexable URLs have unique titles, meta descriptions, H1s, valid social tags, and appropriate image alt text.

LINKS & SILOING

Site Structure, Linking & Sitemap

This section reviews how the site is organised, how authority flows between pages, and whether search engines can efficiently discover the most important URLs. We focus on the structural signals that affect crawlability, topical relevance, and user navigation.

- **Physical Siloing & URL Structure:** We check whether URLs are organised into clear, logical sections such as [/services/](#), [/blog/](#), or [/products/](#). Strong URL structure helps users and search engines understand page context, while overly long, unclear, duplicated, or keyword-stuffed URLs can weaken relevance and make the site harder to crawl.
- **Virtual Siloing & Internal Linking:** We check whether related pages link to each other and whether supporting content points users toward important service, product, or category pages. Good internal linking helps users move through the site, helps crawlers understand relationships between pages, and passes authority to priority URLs.
- **Anchor Text:** We check whether internal links use descriptive anchor text that explains what the linked page is about. Clear anchor text improves relevance signals and is more useful than vague links such as “click here” or “read more”.
- **External Links:** We check whether pages link out to relevant, trustworthy external sources where appropriate. Useful outbound links can support topical relevance and credibility, but links should be relevant, natural, and not point users toward low-quality or untrusted sites.
- **Orphan Pages:** We check whether important pages have no internal links pointing to them. Orphan pages are harder for users and crawlers to find, which can limit their ability to rank even if the content itself is useful.
- **Sitemap Analysis:** We check whether the XML sitemap includes the important canonical URLs that should be indexed, and whether it excludes redirected, broken, duplicated, or non-indexable pages. A clean sitemap helps search engines focus on the pages that matter most.

DATA COLLECTION

Linking

- [Internal](#)
 - [Anchor text](#)
- [External](#)
 - [Anchor text](#)

URLs

- [Orphan Pages](#)

Sitemap

- Proposed ([Spreadsheet](#))
- Proposed ([Relume](#))

FINDINGS

- N/A

- All 13 indexable pages have internal links, with no indexable orphan pages identified. However, the current structure is centred on the projects portfolio: 10 of 13 indexable URLs are project pages, project archives, or the projects hub.
- {InternalLinkingFinding: Summarise internal-link and anchor-text support from the INTERNAL LINKS and ANCHOR TEXT tabs. If service destinations are missing, name only the confirmed missing page types. If services are unconfirmed, mark them “confirm before publishing.”}
- Internal anchor text should become part of the new architecture, rather than being added ad hoc. Each link should clarify the relationship between a hub, service, location, project or advice page.

- N/A

RECOMMENDATIONS

- Implement the proposed sitemap as a structured hierarchy:
 - **Core pages:** Home, About, Contact, Services hub, Commercial Services hub, Service Areas hub, Projects hub, and Advice/FAQs hub.

- **Dedicated service pages:** Create one primary page for each confirmed service, such as {PrimaryService} in {PrimaryLocation}, Emergency {PrimaryService}, {ServiceTheme1}, {ServiceTheme2}, {ServiceTheme3} and Repairs, {AdjacentService3} Services, {AdjacentService1}, and {AdjacentService2}.
 - **Commercial pages:** Place commercial offerings beneath the Commercial Services hub, with dedicated pages only where {ClientName} actively provides and is qualified to deliver the service. For example, Commercial {PrimaryService}, Commercial {AdjacentService2}, and Commercial {AdjacentService3} Services.
 - **Supporting location pages:** Add selective suburb pages beneath the Service Areas hub only for verified coverage areas. Each must contain genuinely local, service-specific content and should not replicate the {PrimaryLocation} service pages.
 - **Supporting content:** Use the Advice/FAQs hub for useful service-led guidance, such as emergency-{PrimaryServiceProvider} costs, burst pipes, geyser issues, {AdjacentService1} servicing and {AdjacentService2} faults. Every article should link to the relevant service page.
 - **Proof pages:** Retain the Projects hub and individual project pages as evidence of experience. Link each project to the most relevant dedicated service page, where applicable.
- Build internal links in both directions. Core hubs should link down to their dedicated pages; individual service, project, suburb and advice pages should link back to their parent hub and across to genuinely related pages.
 - Use descriptive internal anchor text that matches the destination page's purpose. Examples include "{ServiceTheme1} services in {PrimaryLocation}", "{ServiceTheme4}", "commercial {AdjacentService2} services", and "{PrimaryServiceProvider} in Durbanville". Avoid relying only on generic labels, project names or "read more" links.
 - Review existing outbound links for relevance and quality. Use external links where they help users verify information, such as official local authority, safety, certification or manufacturer guidance, rather than trying to increase outbound-link volume.

- Once the new pages are live, update the XML sitemap so it includes only canonical, indexable URLs from the final hierarchy, then submit it through Google Search Console.

On-Page Content Quality

This section reviews whether key pages have enough useful, search-intent aligned copy to compete in organic search. We focus on whether the content gives users the information they need, supports the page's target keywords, and provides enough depth for Google to understand and rank the page appropriately.

- **Correlation Analysis:** We review a small sample of priority pages using a correlation analysis tool to compare keyword usage, content signals, and on-page relevance against competing pages. This helps identify whether important terms, topics, or supporting phrases are underused or missing.
- **Content Length:** We check whether key pages have enough copy for their purpose. The ideal length depends on the page type, but thin service pages, product pages, blog posts, or guides may struggle to rank if they do not provide enough useful information.
- **Content Quality:** We assess whether the content is clear, helpful, original, and detailed enough to satisfy the user. Strong content should explain the topic properly, answer likely questions, support decision-making, and avoid generic copy that could apply to any competitor.
- **Search Intent:** We check whether each page matches what users are actually looking for. For example, informational searches need educational content,

while commercial searches need service, product, pricing, trust, or conversion-focused information.

- Priority Page Improvements: We identify whether sampled pages need stronger keyword targeting, more supporting detail, better structure, clearer calls to action, improved internal links, or consolidation with related content.

DATA COLLECTION

 [Home page correlation analysis - {PrimaryService} services {PrimaryLocation}](#)

 [Example of on-page/entity optimised page for SEO purposes.](#)

 [Content Length](#)

FINDINGS

- The homepage and other indexable pages are crawlable and contain rendered body copy; the homepage has 424 content words in the crawl and 269 body words in Surfer, so there is a base to improve rather than a blank page.
- N/A
- Content depth is a clear constraint. The Content words sheet shows the Contact page has 148 words, the Projects hub has 90 words, and most project pages sit around 96-110 words.
- The Surfer audit for "{PrimaryService} services {PrimaryLocation}" also gives the homepage a Content Score of 21 versus competitor scores of 46-59, with missing exact keyword usage in the title/H1/body and no meta description.

RECOMMENDATIONS

- Prioritise the homepage and new service pages for content expansion. Rewrite the homepage around "{PrimaryService} services {PrimaryLocation}", add a clear H1/title/meta description, expand service and proof sections, add relevant FAQs/internal links, and use the same depth standard for future {PrimaryService}, emergency, {ServiceTheme1}, {ServiceTheme2} and geyser pages.

CONTENT IDEAS

Content Ideas & Strategy

This section turns the keyword and content findings into practical content formats. The aim is not to produce a full content calendar inside the audit, but to show which types of content are most likely to support rankings, links and conversions.

We strongly advise that you not create content just for the sake of content. Content must be backed up by search volume (things people are searching for). Content must have a promotion strategy. Do not publish and pray, rather publish and promote.

Content must be of the highest quality - go for fewer high quality pieces and put more effort into promotion of that content (otherwise, it becomes dead weight).

The types of content which we would advise for you are detailed in the strategy sheet below:

Plum Plumbers Content Strategy & Worklog

Landing Pages

These should follow the proposed sitemap. Landing pages need to be dedicated, conversion-focused pages, while the articles above should link into them using natural descriptive anchors.

Core hub pages

- *{ClientName} {PrimaryLocation} / homepage*
Primary theme: "{PrimaryServiceProvider} {PrimaryLocation}" (350).
- *{PrimaryService} Services in {PrimaryLocation} / services hub*
Primary theme: "{PrimaryService} services" (400).
- *Commercial Services / commercial hub.*

- *Service Areas in {PrimaryLocation} / locations hub.*
- *Projects and Case Studies / proof hub.*
- *Advice and FAQs / supporting content hub.*

Dedicated service pages

- *Emergency {PrimaryServiceProvider} {PrimaryLocation}*
"emergency {PrimaryServiceProvider} {PrimaryLocation}" (100).
- *24-Hour {PrimaryServiceProvider} {PrimaryLocation}*
"24 hour {PrimaryServiceProvider} {PrimaryLocation}" (100).
- *{ServiceTheme1} {PrimaryServiceProvider} {PrimaryLocation}*
"{ServiceTheme1}" (300).
- *{ServiceTheme2} {PrimaryLocation}*
"water {ServiceTheme2}" (300).
- *{ServiceTheme3} {PrimaryLocation}*
"{ServiceTheme3}" (800).
- *{ServiceTheme4} {PrimaryLocation}*
"geyser repair {PrimaryLocation}" (90).
- *{AdjacentService3} Services {PrimaryLocation}*
"electrician {PrimaryLocation}" (300), subject to confirmed scope and certification.
- *{AdjacentService3} Certificates of Compliance*
"certificate of compliance" (700) and "{AdjacentService3} compliance certificate" (250), only where legally applicable.
- *{AdjacentService1} Installation {PrimaryLocation}*
"{AdjacentService1} installation {PrimaryLocation}" (200).
- *{AdjacentService1} Servicing {PrimaryLocation}*
- *Fridge Repair {PrimaryLocation}*
"fridge repair {PrimaryLocation}" (80).
- *Commercial {AdjacentService2} Services*
"commercial {AdjacentService2}" (80).
- *Cold Room Repair {PrimaryLocation}*
"cold room repair near me" (150).
- *Commercial {PrimaryService} Services*
- *Commercial {AdjacentService3} Services*
Only if this is a confirmed offering.

Supporting location pages

- *{PrimaryServiceProvider} Durbanville (150)*
- *{PrimaryServiceProvider} Table View (100)*
- *{PrimaryServiceProvider} Sea Point (90)*

- {PrimaryServiceProvider} Bellville (80)
- {PrimaryServiceProvider} Hout Bay (70)
- {PrimaryServiceProvider} Fish Hoek (60)
- {PrimaryServiceProvider} Milnerton (50)

Create location pages only for suburbs {ClientShortName} genuinely serves and can support with distinct local proof, service details, testimonials or projects. Avoid creating every service-plus-suburb combination, as that risks thin, repetitive pages.

Roundups

Roundups are useful for commercial, local and trust-building content where the objective is to compare options, explain planning considerations, or feature credible complementary experts. They are less likely to be the primary service-page target, but can internally link to the relevant service and advice pages.

- {PrimaryLocation} landlord maintenance checklist: {PrimaryService}, {ServiceTheme3/4}, {AdjacentService3} and {AdjacentService1}
- The essential emergency contact list for {PrimaryLocation} property managers
- A commercial kitchen maintenance checklist: {PrimaryService}, {AdjacentService2} and {AdjacentService3} priorities
- Winter property-maintenance checklist for {PrimaryLocation} homes
- Summer {AdjacentService1} and {AdjacentService2} maintenance checklist for {PrimaryLocation} businesses
- The most common emergency call-outs in residential properties and how to prepare
- What to include in a rental-property handover inspection
- A facilities manager's preventative-maintenance calendar for the year
- Questions to ask before appointing a {PrimaryService}, {AdjacentService3} or HVAC contractor
- Commercial property maintenance mistakes that lead to avoidable downtime

[How to Write The Gathered Experts Guide](#)

[How to Write The Recognition Lure](#)

VS Competitor Articles

VS articles compare the client with a named alternative or compare two common solutions. They can capture high-intent research queries, but should be balanced, factual and conversion-focused.

Use comparison content to catch users who are still deciding what service they need, then lead them to the relevant service page.

- *Emergency {PrimaryServiceProvider} vs standard {PrimaryServiceProvider}: when is it an emergency?*
- *Geyser repair vs geyser replacement: which is more cost-effective?*
- *Drain cleaning vs drain unblocking: what is the difference?*
- *Visible leak vs hidden leak: when do you need {ServiceTheme2}?*
- *{AdjacentService1} repair vs {AdjacentService1} replacement: how to decide*
- *{AdjacentService1} servicing vs {AdjacentService1} repair: what does your system need?*
- *Domestic {AdjacentService2} repair vs commercial {AdjacentService2} repair*
- *Commercial {AdjacentService2} maintenance vs emergency repair*
- *{PrimaryServiceProvider} vs drain specialist: who should handle a {ServiceTheme1}?*
- *{PrimaryService} maintenance vs emergency {PrimaryService}: what property managers should budget for*
- *{AdjacentService3} compliance certificate vs {AdjacentService3} installation work: what each covers*
Only publish once the {AdjacentService3} offering and compliance credentials are confirmed.
- *Reactive maintenance vs planned maintenance for commercial properties*

How-to Guides

How-to guides target practical search intent by walking users through a process. They are useful for building topical authority and can support service pages with internal links.

Keep these professional-first. They should help users make the situation safe, explain when to call {ClientShortName}, and avoid instructing readers to carry out {AdjacentService3}, gas, pressurised-water or {AdjacentService2} repairs themselves.

- *What to do in the first 15 minutes after a burst pipe*

- *How to respond safely to a leaking pipe before a {PrimaryServiceProvider} arrives*
Supports: “how to repair a leaky pipe” (2,400) and “how to repair a leaking pipe” (1,400), without encouraging risky DIY repair.
- *How to tell whether a water leak is hidden behind a wall or under a floor*
- *How to prepare for an emergency {PrimaryServiceProvider} call-out*
- *How to choose a reliable {PrimaryServiceProvider} in {PrimaryLocation}*
- *How to handle a {ServiceTheme1} without making the blockage worse*
- *How to tell whether your geyser needs repair or replacement*
- *How to prepare for a {ServiceTheme3}*
- *How often to service an air conditioner in {PrimaryLocation}*
- *What an {AdjacentService1} service should include*
- *What to do when a fridge is not cooling properly*
- *How to reduce {AdjacentService2} breakdowns in a restaurant, shop or food-service site*
- *How to prepare a commercial property for planned {PrimaryService} maintenance*
- *How to check whether you need an {AdjacentService3} compliance certificate*
Publish only where {ClientShortName} has the appropriate qualifications and authority to provide the service.
- *How to prepare your home or commercial premises for an {AdjacentService3} installation visit*

[How to Write The Step by Step Guide](#)

[How to Write The Yearly Manual](#)

List Posts

List posts work well when searchers want options, examples or comparisons. They are easy to scan, can target long-tail keywords, and often create outreach angles because featured brands or tools may share the article.

- *7 signs you need an emergency {PrimaryServiceProvider} in {PrimaryLocation}*
Supports: “when to call an emergency {PrimaryServiceProvider}” (150 monthly searches).
- *6 factors that affect emergency {PrimaryServiceProvider} call-out costs*
Supports: “how much does an emergency {PrimaryServiceProvider} cost” (100).

- *8 common causes of {ServiceTheme1} and when to call a professional*
Supports: "{ServiceTheme1}" (300).
- *5 warning signs of a hidden water leak in your property*
Supports: "water {ServiceTheme2}" (300).
- *7 signs your geyser needs repair or replacement*
Supports: "{ServiceTheme4} near me" (250) and "geyser repair {PrimaryLocation}" (90).
- *6 questions to ask before booking a {PrimaryServiceProvider} in {PrimaryLocation}*
Supports the "find a reliable {PrimaryServiceProvider} near me" question set.
- *5 {PrimaryService} checks landlords should make between tenants*
Supports rental-property and guest-post outreach.
- *7 signs your air conditioner needs a service*
Supports: "how often should you service your {AdjacentService1}" and "what does an {AdjacentService1} service entail".
- *6 factors that affect {AdjacentService1} installation costs in {PrimaryLocation}*
Supports: "{AdjacentService1} installation {PrimaryLocation}" (200).
- *5 reasons a fridge stops cooling and when to book a repair*
Supports: "how much does fridge repair cost" (70).
- *7 ways commercial sites can reduce {AdjacentService2} downtime*
Supports: "commercial {AdjacentService2}" (80) and "cold room repair near me" (150).
- *6 emergency maintenance issues {PrimaryLocation} property managers should plan for*
A commercial and property-management awareness asset.

[How to Write The Assembled List Post](#)

[How to Write The Padded List Post](#)

[How to Write The Ultimate List](#)

Guest Articles

Guest articles help build authority by earning relevant backlinks and exposing the brand to aligned audiences. Prioritise topics where the client can show expertise and pitch sites that already cover the same industry.

- *Winter {PrimaryService} maintenance checklist for {PrimaryLocation} landlords and property managers*
- *What to do when a burst pipe or {ServiceTheme1} affects a rental property*
- *How restaurants and retailers can reduce commercial {AdjacentService2} downtime*

Prioritise property, landlord and facilities-management publications where {ClientShortName} can demonstrate practical expertise. Use guest articles to earn relevant brand mentions and links back to the most appropriate dedicated service page, rather than always linking to the homepage.

Direct contributor opportunities:

- **Landlords Association of {Country}**
 - *Who is responsible for {PrimaryService} repairs in a rental property?*
 - *Burst pipes, {ServiceTheme1} and leaking {ServiceTheme3/4}: a landlord's emergency checklist*
 - *Preventive {PrimaryService} checks between tenants that help avoid water-damage claims*
- **REI: Real Estate Investor**
 - *How {PrimaryService} maintenance protects the value of an investment property*
 - *The hidden cost of a leaking geyser in a rental portfolio*
 - *What property investors should include in an emergency maintenance plan*
- **SA Best**
 - *When to call an emergency {PrimaryServiceProvider}: seven signs not to wait*
 - *What to do when a pipe bursts: safe first steps before the {PrimaryServiceProvider} arrives*
 - *What affects the cost of an emergency {PrimaryServiceProvider} in {PrimaryLocation}?*
- **The Business Directory**
 - *What small-business owners should include in an emergency maintenance plan*
 - *How commercial {AdjacentService2} downtime affects hospitality businesses*
 - *Five maintenance issues that can disrupt a retail, office or restaurant site*
- **IFMA FMJ** or the **IFMA Knowledge Library**
 - *A preventive-maintenance framework for reducing commercial {AdjacentService2} downtime*

- *How facilities teams can prepare for {PrimaryService} emergencies before they become operational disruptions*
- *When HVAC servicing becomes a business-continuity issue*

Editorial-pitch targets, where a relationship-led pitch is more appropriate than a public guest-post form:

- **[Property Management Blog](#)**: landlord and managing-agent maintenance content.
 - **[{PrimaryService} Africa](#)**: technical or industry-led commentary, case studies and compliance content.
 - **[SAFMA](#)**: facilities-management thought leadership once {ClientShortName} has relevant commercial case studies.
-

COMPETITOR AUDIT

Plum Plumbers

Introduction:

SEO services can play a crucial role in building visibility, brand awareness, traffic and sales from organic search. We take an active step in understanding your business, its branding and positioning. There are over [200 ranking factors](#) to Google's algorithm. Our approach focuses on targeting those factors that have the most influence, and those that will have the biggest return on investment. This approach allows us to tailor our service offering to your business needs - for budgets large or small.

This audit analyses all the known factors through a step by step exhaustive checklist. Using premium tools with our proven methodical approach we're able to ensure your website has all the SEO boxes ticked.

It serves as a blueprint for exactly what needs to be changed in order for your website to be SEO optimized and increase the organic traffic. We also outline the areas that will yield the greatest return on investment.

The final audit report can be used as either a basis for a retainer, or as a blueprint for your internal development team to resolve any issues and grow your site's traffic.

Backlink Profile

[Search engine ranking factor survey](#) data has shown that getting external links is the single most important objective for attaining high rankings. This stems from the idea that external links are one of the hardest metrics to manipulate and thus, one of the best ways for search engines to determine the popularity of a given web page. This idea was first used by the early search engine Alta Vista and later improved upon by Google.

Google first made its mark by [introducing the Stanford community to PageRank](#) (an algorithm developed by Google co-founder Larry Page). This algorithm counted hyperlinks as votes for popularity. The pages that had the most links pointing at them were considered the most popular. When they were deemed relevant for a particular query, the most popular and relevant pages would become the first pages listed in Google's results. Although this algorithm is much more complex today, it still likely includes the notion of external links as votes.

Basically the more quality backlinks you have the higher you rank.

Today, the major search engines use many metrics to determine the value of external links. Some of these metrics include:

- The [trustworthiness](#) of the linking domain.
- The [popularity](#) of the linking page.
- The relevancy of the [content](#) between the source page and the target page.
- The [anchor text](#) used in the link.
- The number of links to the same page on the source page.
- The number of [root domains that link](#) to the target page.
- The amount of variations that are used as anchor text to links to the target page.
- The ownership relationship between the source and target domains.

In addition to these metrics, external links are important for two main reasons:

1. Popularity

Whereas traffic is a "messy" metric and difficult for search engines to measure accurately (according to Yahoo! search engineers), external links are both a more stable metric and an easier metric to measure. This is because traffic numbers are buried in private server logs while external links are publicly visible and easily stored. For this reason and others, external links are a great metric for determining the popularity of a given web page.

2. Relevancy

Links provide relevancy clues that are tremendously valuable for search engines. The [anchor text](#) used in links is usually written by humans (who can interpret web pages better than computers) and is usually highly reflective of the content of the page being linked to. Many times this will be a short phrase (e.g., "best aircraft article") or the URL of the target page (e.g., <http://www.best-aircraft-articles.com>).

The target and source page, as well as the [domain](#) cited in a link also provide valuable relevancy metrics for search engines. Links tend to point to related content. This helps search engines establish knowledge hubs on the Internet that they can then use to validate the importance of a given web document.

Ahrefs

We use a premium tool called Ahrefs to get insight into your backlink profile.

WOWW.CO.ZA/ ▼

Ahrefs Rank ⁱ	UR ⁱ	DR ⁱ	Backlinks ⁱ	Referring domains ⁱ	Organic keywords ⁱ	Organic traffic ⁱ	Traffic value ⁱ
231,258	34	61	16.6K Recent 18K Historical 38.5K	185 Recent 205 Historical 329	2.0K +102 PPC 0	2.4K +379	\$4.1K PPC \$0

For the mini audit, Ahrefs is used to compare backlink strength, referring domains and link gaps against selected SEO competitors. The goal is to identify whether authority is likely holding the site back and where realistic backlink opportunities exist.

Every website is given an Ahrefs Rank, UR and DR

Ahrefs Rank (AR) shows the target website's position among all other websites in our database rated by the "strength" of their backlink profiles. The website with the strongest backlink profile is ranked #1

URL Rating (UR) shows the strength of the target URL's backlink profile on a 100-point logarithmic scale (higher = stronger). Both internal and external links influence this metric. NOTE: UR has a clear positive correlation with Google rankings, meaning that high-UR pages tend to rank higher in the organic search results. When the whole domain is analyzed in Site Explorer, URL Rating will be shown for the homepage.

Domain Rating (DR) shows the relative "backlink popularity" of the target website compared to all other websites in our database on a 100-point logarithmic scale (higher = stronger). We calculate DR based on the number of websites linking to the domain's URLs and their backlink profile strength.

Both numbers scale logarithmically.

DATA COLLECTION: Client

Competitors (Ahrefs Overview)

We chose your biggest competitors in terms of data. I.e: competitors who compete for similar terms and rank the highest on Google for your target audience. While these may not be your real life competitors, they are ranking for keywords and terms you want to rank for.

DATA COLLECTION

[Keyword intersect](#) - [your competitors have these keywords but you don't]

[Link intersect](#)

DATA COLLECTION: {Competitor1}

DATA COLLECTION: {Competitor3}

DATA COLLECTION: {Competitor2}

DATA COLLECTION: {Competitor4ShortName} {PrimaryService}

DATA COLLECTION

[Backlinks](#)

[Backlink anchors](#)

[Referring domains](#)

[Link intersect](#) [your competitors have these backlinks, but you don't]

[Keyword Intersect](#) [your competitors have these keywords but you don't]

FINDINGS

- Your site has 414 referring domains (unique domains linking to your site) which together have produced 646 backlinks in the updated backlink data, including 82 followed backlinks from 36 followed referring domains.
- {ClientName} has a useful raw backlink footprint, but current rankings show those links are not yet translating into organic visibility.
- The gap is quality, relevance and page-level support rather than link volume alone. The link-intersect data should be used to prioritise credible local, supplier, trade, business and property-management opportunities that competitors have but {ClientShortName} does not.
- N/A

RECOMMENDATIONS

Prioritise link building from relevant domains that already link to competitors, while continuing to protect the quality of the existing backlink profile. Focus on industry directories, suppliers, partners, publications and associations where a link would make sense for users as well as search engines.

Google My Business

An important first step in any local SEO strategy is to claim and verify your local business's Google My Business (GMB) listing. Getting on Google My Business can increase your chances of showing up in Google's Local Pack, Local Finder, Google Maps, and organic rankings in general.

[Qualifying local businesses](#) can claim a free listing on Google and include information about their company, such as their address, phone number, business hours, and types of payment accepted.

Additionally, over the past several months, Google has added some great features to Google My Business that companies should take advantage of to enhance their listings and help grab viewers' attention - and can increase their rankings in local search results.

About Woww Cape Town Web Design

Woww is an award-winning full-service digital agency focused on WordPress web design and complementary services. With a small but passionate team, Woww ...

The image shows a Google My Business profile for 'Woww'. At the top, there are two photos: an interior view of a modern office space and a map showing the location at Salt River Rd. Below the photos, the business name 'Woww' is displayed with a 5.0 star rating and 46 Google reviews. The profile includes buttons for 'Website', 'Directions', and 'Save'. The address is listed as 'Salt Orchard, Unit C4 Corner Briar &, Yew St, Salt River, Cape Town, 7925, South Africa'. The hours are marked as 'Closed' with a note that they open at 8:30 AM on Wednesdays. A 'Health & safety' section lists requirements like appointment, mask, and temperature checks. Contact information includes a phone number (+27 21 671 6531) and a website link (woww.co.za). There is also a 'Questions & answers' section with one question and answer. At the bottom, there are options to 'Send to your phone', 'Write a review', and 'Add a photo'.

This is an example of the {AgencyName} Google My Business account. As you can see, it has useful information (such as contact info and hours) and a 5-star rating with a fair number of reviews.

FINDINGS

- {ClientName} has a [visible Google Business Profile](#).
- It has 139 reviews and a 5.0-star rating
- The profile has between 15-20 images
- The phone number is listed
- Address is visible
- Operating hours are listed
- Frequently asked questions are missing from the profile
- Service categories are missing from the profile
- Services and service options are missing from the profile
- Posts section was last utilised in 2022

- {ClientName}' 5.0 rating is a strong local trust asset, but its visible review count still sits behind larger GBP competitors such as {Competitor4}, {Competitor2} and {Competitor3}.
- {Competitor1} has a smaller visible review footprint, so {ClientShortName}'s review strength is not the issue; the main comparison gap is review volume versus the larger local brands.
- The main profile gap is completeness: FAQs, service categories, service options and recent posts are missing, while competitors show stronger local-service targeting and more active trust signals.
- More current team, vehicle, job-site, before-and-after and service-specific photos can improve conversion confidence for emergency {PrimaryService}, {ServiceTheme3/4}, {ServiceTheme2} and drain searches.
- Keep building recent reviews while improving profile completeness so {ClientShortName} can compete on both rating quality and perceived local depth.
- The profile appears unclaimed
 - "Own this business?" link below the listing
 - Must claim business.

RECOMMENDATIONS

- Claim the profile
- Start publishing posts again that are based around your service offerings, service areas and any promotions.
- Add service categories and services, and populate them to align with all of your relevant offerings.
- Add frequently asked questions to the profile to answer questions around turnaround times/emergency {PrimaryService} if applicable to {ClientName}, and information around other services and questions that customers might have about them.
- Keep encouraging reviews from happy customers and maintain the current review score.
- When launching social media presences outside of Facebook and Instagram, ensure that you add these links to the profile.

We put together a spreadsheet with 4 competitors, measuring company context, content activity, SEO, backlink quality, local signals and social media. This gives insight beyond raw traffic or link counts.

This is to give some insight in comparing companies on more than just SEO data.

[Initial Competitor Analysis](#)

[Detailed Competitor Analysis](#)

ANALYSIS SUMMARY: [{ClientWebsiteURL}](#)

- {ClientName}' domain was registered on 8 August 2020, making it 5 years, 11 months and 29 days old as of 6 August 2026.
- {ContentFootprintFinding: State whether the site has a blog, service-page set, project/content hub and keyword-led landing pages based on URLs, Content words, Proposed Sitemap and Content Strategy sources. Do not assume absence unless the crawl confirms it.}
- The crawl and keyword work indicate that the website is project-led rather than service-led, which limits its ability to rank for {PrimaryService}, emergency, geyser, {ServiceTheme2} and drain searches.
- Local trust is a strength: {ClientShortName} has a 5.0 rating, visible contact details, operating hours and profile imagery.
- GBP gaps remain around FAQs, service categories, service options and recent posts.
- Image use should be expanded with more team, vehicle, job-site and service-specific visuals across GBP and the website.
- SEO metrics: DR 0.1, UR 0, 414 referring domains, 646 backlinks and 82 followed backlinks from 36 followed referring domains.
- The completed intersect data records no top-10 keyword rankings for {ClientShortName}, despite the existing backlink footprint.
- The priority is to turn existing real-world capability into clear service pages, stronger internal linking, useful advice content and relevant local authority signals.

ANALYSIS SUMMARY: <https://{Competitor1Domain}/>

- {Competitor1} is a very new domain, registered on 2 October 2025, yet it is already the clearest on-page/service-location benchmark.
- The site has a strong blog and landing-page footprint, including service pages, emergency {PrimaryService} pages, geyser pages and suburb targeting.
- It ranks for high-intent {ClientShortName}-relevant terms including {PrimaryServiceProvider} {PrimaryLocation} #3, {PrimaryServiceProvider}s {PrimaryLocation} #4, emergency {PrimaryServiceProvider} #5 and 24 hour {PrimaryServiceProvider} {PrimaryLocation} #6.
- SEO metrics: DR 0, UR 7, 1 referring domain, 7 backlinks and 51 top-10 keyword rankings.
- Its performance shows that clear intent matching and page structure can work even without meaningful domain authority.
- GBP/review footprint is smaller than {ClientShortName}'s, so this competitor is stronger as a page-structure benchmark than as a local-review benchmark.
- {ClientShortName} should use this competitor as a practical model for service/suburb architecture, not as a link-building benchmark.
- The transferable lesson is focused service intent, direct CTAs and scalable local landing pages.

ANALYSIS SUMMARY: <https://{Competitor2Domain}/>

- {Competitor2} has a long-established domain, registered on 3 August 2005, and offers construction, {AdjacentService3} and {PrimaryService} services.
- Its {PrimaryService} page covers maintenance, repairs, 24-hour callouts, blocked pipes/drains, {ServiceTheme2}, geyser replacement, COCs, drain jetting and burst pipes.
- It ranks for relevant {ClientShortName} opportunities including {PrimaryService} companies in {PrimaryLocation} #2 (Vol 150, KD 6), {PrimaryService} companies #3 (Vol 150, KD 19), {PrimaryServiceProvider}s in {PrimaryLocation} #4 (Vol 150, KD 0), {PrimaryServiceProvider}s {PrimaryLocation} #5 (Vol 200, KD 0) and {PrimaryServiceProvider} {PrimaryLocation} #5 (Vol 350, KD 0).

- SEO metrics: DR 10, UR 4.9, 410 referring domains, 515 backlinks, 108 followed backlinks from 18 followed referring domains and 40 top-10 keyword rankings.
- {Competitor2}'s local profile is a stronger review-volume benchmark than {ClientShortName}, with a 4.6 rating and a much larger review footprint recorded in the completed sheet.
- {Competitor2} is a useful benchmark for mixed {PrimaryService}/{AdjacentService3} authority, but its limited service-location depth means {ClientShortName} can compete with more focused commercial pages.
- The key takeaway is to build service pages that are more specific and conversion-led than {Competitor2}'s broader group-service structure.
- {ClientShortName} should treat {Competitor2} as a credibility benchmark, not a final model for service-page depth.

ANALYSIS SUMMARY: <https://{Competitor3Domain}/>

- {Competitor3} has the oldest domain in the detailed set, registered on 9 July 2002, and operates as a national emergency {PrimaryService}/franchise brand.
- It is the strongest organic visibility benchmark, with branch/location and service targeting for emergency {PrimaryService}, {ServiceTheme1}, CCTV drain inspections, jetting, pipe relining, {ServiceTheme3/4} and {ServiceTheme2}.
- It ranks for major {ClientShortName}-relevant terms including emergency {PrimaryServiceProvider}s #1, {ServiceTheme1} #1, burst geyser #1 and emergency {PrimaryServiceProvider} #2.
- SEO metrics: DR 9, UR 4.6, 410 referring domains, 1,029 backlinks, 431 followed backlinks from 118 followed referring domains and 188 top-10 keyword rankings.
- Its local profile is a meaningful trust benchmark, with a 4.8 rating and a larger review footprint than {ClientShortName} in the completed sheet.
- {ClientShortName} should use {Competitor3} as the benchmark for emergency, drain and geyser intent, while recognising that its national/franchise footprint is broader than {ClientShortName}'s current site.
- The transferable lesson is clear service clustering around urgent problems, not trying to match the national brand footprint.

- {ClientShortName} should create focused {PrimaryLocation} pages for emergency {PrimaryService}, {ServiceTheme1}, {ServiceTheme3/4} and {ServiceTheme2} before expanding into thinner support content.

ANALYSIS SUMMARY: [https://\[{Competitor4Domain}\]/](https://[{Competitor4Domain}]/)

- {Competitor4} has a mature domain, registered on 15 September 2014, and the strongest authority score in the selected competitor set.
- Its site has the broadest service/suburb footprint, including {PrimaryService}, renovations, drain cleaning, {ServiceTheme2}, pipe relining, {ServiceTheme3/4}, heat pumps, commercial {PrimaryService} and utility location.
- It ranks for relevant terms including {ServiceTheme4} near me #4 (Vol 250), water {ServiceTheme2} #10 and {PrimaryServiceProvider} fish hoek #3.
- SEO metrics: DR 51, UR 9, 401 referring domains, 485 backlinks, 69 followed backlinks from 19 followed referring domains and 40 top-10 keyword rankings.
- {Competitor4ShortName} has the strongest review footprint in the set, with a 5.0 rating and a very high recorded review count.
- {Competitor4ShortName} is the strongest benchmark for authority, review footprint and service-page breadth, but its organic traffic is still lower than {Competitor3} and {Competitor1}.
- {ClientShortName} should use {Competitor4ShortName} as a benchmark for service coverage and trust depth, not as a reason to chase domain authority before fixing page relevance.
- The key takeaway is to pair broader service coverage with proof, FAQs and internal links so those pages can convert as well as rank.

RECOMMENDATIONS

- Prioritise high-intent service pages before expanding low-value blog output.
- Build pages for core {PrimaryService}, emergency {PrimaryService}, {ServiceTheme1}, {ServiceTheme2}, {ServiceTheme3}, {ServiceTheme4} and any confirmed {AdjacentService3}, {AdjacentService1} or {AdjacentService2} services.
- Start with {PrimaryLocation} service intent and then build selective suburb pages only where {ClientShortName} can add real local proof.
- Give each service page a unique H1, service-specific evidence, clear enquiry CTA, FAQs and internal links to related services or projects.
- Improve core metadata: add missing meta descriptions, strengthen thin titles and make each page's search intent clear.
- Use clear heading hierarchy and add supporting sections that answer customer concerns around response times, costs, qualifications, process and service areas.
- Start a sustainable Advice/FAQs programme aligned to useful {PrimaryService} questions: burst pipes, {ServiceTheme1}, leaks, {ServiceTheme3/4}, emergency callouts, {AdjacentService1} servicing and {AdjacentService2} faults.
- Use {Competitor1} as the clearest benchmark for service/suburb page structure and intent matching.
- Use {Competitor3} as the benchmark for emergency, drain and geyser clusters.
- Use {Competitor2} as the benchmark for mixed {PrimaryService}/{AdjacentService3} credibility and COC-related content where {ClientShortName} is qualified to offer those services.
- Use {Competitor4} as the benchmark for authority, review depth and broader service coverage.
- Improve internal links from the homepage, services hub, project pages, advice content and service-area pages using descriptive anchor text.
- Add original images and meaningful alt text to commercial service, project and service-area pages.
- Add appropriate structured data to key service pages, following the Technical Audit's guidance.
- Improve conversion paths: show trust signals, reviews, service FAQs and a consistent request-a-callback or emergency-contact CTA.
- Build higher-quality local, supplier, trade, business-directory and property-management links to support the new pages.
- Keep GBP service categories, services, hours and website service pages aligned.

- Add live social links to the website only for profiles {ClientShortName} can realistically maintain.
- Use social posts to amplify new service pages, advice resources, project proof, reviews and local trust signals.
- Track organic traffic, top-10 keywords, local rankings, referring-domain quality, GBP review growth and enquiries monthly.
- Use the completed Content and Technical Audits to sequence work and avoid duplicated effort.

SOCIAL MEDIA & SOCIAL SIGNALS

This section reviews {ClientName}' social presence and how it supports trust, local visibility, content distribution and conversion. The audit focuses on whether live social profiles are linked from the website, whether channels are active enough to support the brand, and how competitors use social content such as Reels, project proof and practical advice.

Studies have concluded that Social signals are included as a ranking factor, we outline and identify your social presence and the impact it's having on your SEO.

SOCIAL SUMMARY:

{ClientName}: [{ClientWebsiteURL}](#)

- Social icons are not present on the site, so users cannot easily move from the website to active social proof.
- Facebook activity was not found as an active account in the completed competitor sheet.
- Instagram has 184 followers, but the last observed post was 99 weeks ago.
- LinkedIn is not recorded for {ClientShortName}, limiting business trust signals for commercial and property-management audiences.
- YouTube has 2 subscribers, 6 videos and 820 total views; the last video was posted around four years ago.
- {SocialFinding: State whether social activity supports trust, content distribution or local visibility. If profiles are inactive, absent or unavailable, say so with the reviewed channels and evidence date.}

SOCIAL SUMMARY:

{Competitor1}: <https://{Competitor1Domain}/>

- Facebook is very active, with roughly 20-30 July posts, Reels and typical video views in the 100-400 range.
- TikTok has 970 followers and 2,731 likes, with activity mirroring the Facebook cadence.
- No Instagram, LinkedIn, YouTube or X/Twitter account was recorded.
- {Competitor1} is the clearest benchmark for using frequent short-form social content to support a new service-led site.
- Its main advantage is consistency and visibility rather than follower scale.

SOCIAL SUMMARY:

{Competitor2}: <https://{Competitor2Domain}/>

- {Competitor2SocialFinding1}: summarise Facebook or primary-channel activity from the competitor analysis sheet.}
- {Competitor2SocialFinding2}: summarise Instagram/visual-channel activity and caveats.}
- {Competitor2SocialFinding3}: summarise LinkedIn/commercial credibility evidence if reviewed.}
- {Competitor2SocialFinding4}: summarise short-form/video activity if reviewed.}
- {Competitor2} is the strongest benchmark for social breadth and established local trust signals.

SOCIAL SUMMARY:

{Competitor3}: <https://{Competitor3Domain}/>

- {Competitor3SocialFinding1}: summarise Facebook/branch/profile activity if reviewed.}
- {Competitor3SocialFinding2}: summarise Instagram activity if reviewed.}
- {Competitor3SocialFinding3}: summarise YouTube/video evidence if reviewed.}
- {Competitor3SocialFinding4}: summarise inactive/low-value channels only with evidence date.}

- {Competitor3} shows that brand visibility and video assets can support trust even when some channels are inactive.

SOCIAL SUMMARY:

{Competitor4}: <https://{Competitor4Domain}/>

- {Competitor4SocialFinding1: summarise Facebook/video performance if reviewed.}
- {Competitor4SocialFinding2: summarise Instagram activity/cadence if reviewed.}
- {Competitor4SocialFinding3: summarise YouTube/video footprint if reviewed.}
- {Competitor4SocialFinding4: summarise LinkedIn activity if reviewed.}
- {Competitor4SocialFinding5: summarise TikTok/short-form activity if reviewed.}
- {Competitor4ShortName} has stronger social proof than {ClientShortName}, but its activity is uneven enough that {ClientShortName} can compete with a focused, realistic cadence.

RECOMMENDATIONS

- Add live social links to the website footer once {ClientShortName} has profiles it can realistically maintain.
- Use Instagram and YouTube as proof-led channels, and consider Facebook/TikTok only if {ClientShortName} can sustain short-form job and advice content.
- Restart with a realistic cadence: two to four useful posts per month per priority channel before increasing volume.
- Use short-form video to explain common {PrimaryService} issues, emergency callouts, {ServiceTheme1}, leaks, geyser faults, maintenance tips and project outcomes.
- Repurpose each new service page, FAQ or project into social posts that drive users back to the relevant page.
- Show trust: reviews, team members, vehicles, certifications, clear process steps, job-site proof and behind-the-scenes content.
- Use location-specific posts for {PrimaryLocation} service areas only where there is genuine local work, imagery or proof to share.
- Use Reels, Shorts or TikTok where practical; {Competitor1} and {Competitor2} show that short-form content can support local visibility and trust.
- Use LinkedIn lightly for commercial credibility, partnerships, recruitment, qualifications and project milestones.
- Use YouTube only when there is a repeatable supply of useful service, project or explainer video; do not create a channel simply to match competitors.
- Track follower growth, reach, engagement, video views, website clicks and assisted enquiries, then repeat formats that perform.

{Template instruction: Write this section last. It must summarise the audit's evidence, not introduce new findings. Use the technical audit, content audit, competitor audit, content strategy and worklog to create a clear executive narrative.}

{ClientName} has {OverallOpportunitySummary}. The completed audit shows {PositiveFoundation} but also {PrimaryVisibilityConstraint}.

From the keyword and Google data review, {ClientName} currently {KeywordPerformanceSummary}. Tie this to the Existing Keywords, Google Search Console, Google Analytics and Keyword Intersect sheets. If no data is available, state that clearly and explain the implication for baselining.

From the crawl and on-page review, the main structural issue is {SiteStructureIssue}. Use the URLs, Content words, H1, title, meta description, image-alt and internal-link tabs to support the claim with exact counts.

The content strategy should prioritise {PrimaryPageTypeOrTheme} because {StrategicReason}. Reference the proposed sitemap, content ideas, keyword brackets and competitor gaps. Separate new pages from optimisation work.

The technical priorities are {TechnicalPrioritySummary}. Mention redirects, canonical/preferred domain behaviour, trailing slashes, indexation, speed/Core Web Vitals, security, analytics/GSC and CMS/plugin items only if reviewed.

The competitor and backlink review shows {CompetitorGapSummary}. Use competitor analysis, keyword intersect, referring domains, backlinks, anchors and link intersect tabs to explain whether the client needs stronger service pages, more authority, better local proof or all three.

The recommended next step is to complete the prioritised action plan in the Areas for Improvement section and move the agreed tasks into the worklog with owner, priority, estimate and implementation notes.

Areas for Improvement

Here we will discuss the sections of this audit and what actions we suggest you take to address the problems.

TECHNICAL	10+ suggested actions
{TechnicalActionsSummary: Summarise the technical action priorities from the technical audit. Mention only evidence-backed issues and include unavailable evidence as a caveat.} ❑ {TechnicalAction}: Prioritise the highest-impact technical fix with source, rationale, owner and implementation note.}	

- ❑ {TechnicalAction2: Review caching/CDN/image/script/font opportunities only where performance evidence supports them. Include device, location, test date and target metric if available.}
- ❑ Use Google Analytics and Google Search Console to establish a performance baseline, then monitor organic clicks, enquiries, keyword visibility, service-page engagement and technical errors monthly.
- ❑ Confirm that all domain variations, trailing-slash versions and legacy URLs resolve consistently to one preferred canonical URL. Update internal links to point directly to final URLs rather than redirects.
- ❑ {TechnicalAction5: Add security-header or malware/security action only if the security scan/header check supports it.}
- ❑ Keep plugins, themes and WordPress core updated through a managed maintenance process, with backups taken before changes are applied.

CONTENT

10+ suggested actions

{ContentActionsSummary: Summarise the main content issue from URL structure, content word count, metadata/H1/image tabs, proposed sitemap and keyword research. Do not assume the site is project-led unless the crawl proves it.}

- ❑ {ContentAction1: Create or optimise only the service/location pages supported by keyword research, proposed sitemap and confirmed operational services. Mark unconfirmed services as “confirm before publishing.”}
- ❑ Create {AdjacentService3} certificate-of-compliance pages only where {ClientName} is legally authorised to issue the relevant certification. Apply the same principle to {AdjacentService1}, {AdjacentService2} and commercial services.

- ❑ Prioritise lower-difficulty, high-intent local opportunities first, including *{PrimaryServiceProvider} {PrimaryLocation}, {PrimaryService} services, 24 hour {PrimaryServiceProvider} {PrimaryLocation}, {ServiceTheme1}, water {ServiceTheme2} and {ServiceTheme3}*.
- ❑ Build selective suburb pages only after the main {PrimaryLocation} service pages are live. Each should contain genuinely local proof, service-specific detail, availability information, reviews or relevant projects. Avoid mass-producing near-identical location pages.
- ❑ {ContentAction5: Add metadata/H1/title fixes using exact counts from the page titles, meta descriptions and H1 tabs.}
- ❑ Replace missing and generic image alt text, particularly “client”, with concise descriptions of meaningful service and project imagery.
- ❑ Build an Advice/FAQs hub for useful informational searches, including burst-pipe costs, emergency-{PrimaryServiceProvider} pricing, leak issues, geyser faults, {AdjacentService1} servicing and {AdjacentService2} problems. Every article should link naturally to its relevant service page.
- ❑ Use the Projects hub as evidence of capability. Link individual project pages to the most relevant service pages so project content helps support commercial rankings.
- ❑ Maintain a keyword-to-page map. Assign one primary service and search intent to each URL to prevent overlap and future cannibalisation.

COMPETITORS

10+ suggested actions

{CompetitorActionsSummary: Summarise competitor gaps from approved search competitors, keyword intersect, competitor analysis and backlink/link-intersect evidence. Do not assume no comparable footprint unless the intersect data proves it.}

- ❑ Use the selected competitor set as a practical benchmark: {Competitor4} for authority and review depth, {Competitor2} for mixed {PrimaryService}/{AdjacentService3} credibility, {Competitor3} for emergency/drain/geyser intent, and {Competitor1} for focused service/suburb page structure.
- ❑ {CompetitorAction2: Recommend page, authority, trust or internal-link improvements based on the specific competitor gap shown in the source data.}
- ❑ Review the keyword-intersect data regularly to identify service terms competitors rank for that {ClientName} still does not target.
- ❑ Use the link-intersect research to build a shortlist of relevant backlink opportunities, prioritising credible local directories, industry associations, suppliers, property-management resources, business publications and partnership opportunities.
- ❑ Strengthen local trust signals on service pages through project evidence, qualifications, service areas, clear contact information, reviews and service-specific FAQs.
- ❑ Build links and relationships around useful resources and genuine business relevance. Avoid low-quality link schemes or generic directories that do not provide value to {PrimaryLocation} customers.

SOCIAL MEDIA

15 suggested actions

{SocialActionsSummary: Summarise the client's social/trust/distribution state from reviewed profiles. Recommend only channels the client can realistically maintain, and cite the competitor/social evidence used.}

- ❑ Add live social links to the website footer once {ClientShortName} has profiles it can realistically maintain.

- ❑ Link only to active, maintained profiles; remove icons for channels that will remain dormant.
- ❑ Use Instagram and YouTube as proof-led channels, and consider Facebook/TikTok only if {ClientShortName} can sustain short-form job and advice content.
- ❑ Start with a consistent two-to-four-post monthly cadence, then scale based on response.
- ❑ Create short-form videos answering practical {PrimaryService} questions, explaining emergency callouts, showing {ServiceTheme1}/leak/geyser work, and demonstrating project outcomes.
- ❑ Use customer reviews, local service proof, staff/team content, vehicles, certifications and clear process education to build trust.
- ❑ Create location-specific posts for {PrimaryLocation} service areas only where there is genuine local work, imagery or proof to share.
- ❑ Share new blogs, FAQs and location pages to give SEO content a distribution path.
- ❑ Use {Competitor1} and {Competitor2} as benchmarks for accessible short-form video experimentation and consistent local visibility.
- ❑ Use {Competitor3} and {Competitor4} as benchmarks for brand trust, service proof and selective video use.
- ❑ Use LinkedIn for partnerships, company news, recruitment and trust-building rather than high-frequency consumer posts.
- ❑ Only add YouTube when video production can be maintained with useful, searchable topics.
- ❑ Build a simple content calendar around {PrimaryService} FAQs, reviews, project proof, service-area updates, seasonal maintenance questions and new resources.
- ❑ Track follows, reach, engagement, video views, site clicks and attributed enquiries.
- ❑ Use performance data to refine format, cadence and subject matter each quarter.
